OEM approval – IBM

Due to the thermal paper's importance as the only consumable to produce the image and the continuous growth of thermal printers on the market, Torraspapel continuously starts approval processes of its Termax range with the main thermal manufacturers.

Termax paper has undergone long rigorous tests to certify that the paper meets the requirements of thermal printers. Thanks to our advanced and precise curtain coating system, a completely homogeneous and smooth paper is obtained. These are essential factors in developing a clear and uniform image. Termax has satisfactorily passed these tests with diverse manufacturers and has other ongoing processes.

IBM, one of the main thermal printer manufacturers, has already given us their official approval after **Termax P-55 S** successfully concluded all the tests carried out on its SureMark 4610 printer. Moreover, this grade complies with the strict IBM Toxicology and Chemical Management Requirements that guarantee a safe use of the Termax P-55 S paper on their SureMark 4610 printers.
